

Dev CoreSpark™

AI accelerated mission prototyping with working software in days.

Every agency has mission concepts stuck in PowerPoint. Every program office has been burned by vendors who promise capabilities they can't demonstrate. The cost of building a prototype used to justify the delay — but AI-accelerated development has eliminated that excuse.

There's too much AI talk and not enough real proof.

Dev CoreSpark™ delivers working, deployable prototypes in 5–10 business days using AI-accelerated, spec-driven development. Not mockups. Not wireframes. Running software your team can touch, test, and take to production.

How It Works

Phase	Duration	Deliverable
Frame — Define the mission question	Days 1–2	Problem statement, success criteria, scope boundary
Build — AI-accelerated sprint	Days 3–8	Working prototype on your target platform
Prove — Demonstrate & decide	Days 9–10	Live demo, architecture record, production roadmap

Two Ways to Engage

	CoreSpark™ Embedded	CoreSpark™ Direct
For	Existing partners & active programs	Agencies exploring new capabilities
Access	Through current contract or teaming agreement	Direct engagement via GSA MAS, AWS Marketplace, or Tradewinds
Best for	Problem discovery, market research, capture demonstrations, sprint-zero exploration	Defined prototype sprint with clear go/no-go outcome

What You Get

- ✓ Working, deployable prototype (not a concept demo)
- ✓ Architecture decision record
- ✓ Security & compliance considerations documented from day one
- ✓ Production readiness assessment
- ✓ Transition roadmap — prototype → ATO → production

Dev Technology is driven to make technology work for the government so the government can work for the people.

At Dev Technology, our people-first mentality drives our day-to-day, encouraging us to put a real-world focus on our approach to technology. Our results are thoughtfully built with end-user insight guiding each step of the process.

We leverage our capabilities in Cloud Development, Artificial Intelligence & Data Analytics, and Biometrics & Cybersecurity to deliver mission-critical solutions to federal agencies. We take on complex, data-intensive challenges, delivering innovative solutions that better our national and economic security.
